**Subject:** USSN 09/842,749 Proposed Interview on Wednesday February 25, 2004 at 10AM with Examiner Nguyen

As discussed in our telephone conversation, I set forth hereinbelow, in advance of our interview, an Agenda for discussion at the interview.

1. Rejection of claims 1, 7 and 8 under 35 U.S.C. 103(a) over Friedman and Lo. Applicant respectfully submits that Lo does not teach sending a message indicating when a future receiving window will be open, as stated by the Examiner. Rather Lo describes sending a message that a receiving window is open.
2. Rejection of claims 2, 9, 18 and 28 under 35 U.S.C. 103(a) as being unpatentable over MacLennan et al in view of Lo. Applicant respectfully submits does not teach both of the receiving windows as claimed, specifically the random access receiving window during which the base station is operative to receive communications from any of the plurality of tags. Regarding claim 9, MacLellan et al does not show a dynamic identifier but rather a simple ID
3. Rejection of claims 4-5, 16, 27, 30 - 38 under 35 U.S.C. 103(a) as being unpatentable over MacLellan et al in view of Wizgall. It is respectfully submitted that Wizgall does not teach the emergency communications window as claimed, contrary to that stated by the Examiner.
4. Generally, the correctness of the combinations made by the Examiner in rejecting the claims, without the presence of a suggestion to combine, and with hindsight is respectfully challenged by applicant.

I look forward to meeting you at 10AM on Wednesday February 25, 2004.

Sanford T. Colb
